Tricks with Spool Files using SQL

Date:	February 21st
Time:	6:00 PM
Location:	GoToMeeting Only
Speaker:	Simon Hutchinson
Presentation:	Tricks with Spool Files using SQL

Overview:

In the past few releases and TRs IBM has introduced a number of SQL views and table functions that allow anyone to do things to spool files that they would have had to use APIs or complex programming. Become the superstar at your company with the knowledge on how to do all of this with just a few SQL statements.

About the Presenter:

Simon's experience with IBM midrange started over 30 years ago in the United Kingdom, in a pre-AS/400 world. Since immigrating to the USA, in 1992, he has worked mostly in the South West and is currently IT manager responsible for Power servers and IBM i for a large bank in Central Texas. Simon has been writing his acclaimed IBM i blog, RPGPGM.COM, for nine years sharing his knowledge, experience, and giving many detailed examples of the latest RPG, SQL, and CL. He was recognized by IBM as an IBM Champion for Power in 2021 and 2022, and is an IBM i Community Advocate.

From the President:

Dear Members:

Our recent “Student Meet and Greet” event was a great success. We were very pleased to have 27 students participate and many organizations looking to connect with student resource and colleges including IBM i curriculum. As a result several connections have been made and conversions are in progress. If you weren’t able to make it on January 25th and would like to connect with the students and/or schools that participated send an email to Laura at ubelhor@sbcglobal.net. There is a great bunch of students ready, willing and able to become the next generation on IBM i. We are planning some future similar events and will keep our community updated on events.

RPGPGM.COM - From AS400 to IBM i

Advice about programming, operations, communications, and anything else I can think of

This blog is about IBM i for Power

Identifying profiles with

If you have users using your partition's IES when one of them manages to disable their access, I wrote about how they can re-enable their access using the QZLSCHSI API. What if I want to be able to identify the profiles who already have disabled access?

Fortunately the information is attached to the user profile with any of the User Profile commands, for example the USER_INFO. This View contains the column NE... their Netserver access then this column will...

The statement I would use is:

We're excited to have a very awesome and useful topic for our February meeting. Thank you to Simon Hutchinson for all he does for the community. If you haven't done so already you should visit and sign up for Simon's site RPGPGM.com. Simon has been serving the community for many years through his blog. We appreciate that Simon is presenting in February. We all use spool files in one form or another. Fewer and fewer companies over the years are printing hard copies but instead are working with electronic copies of spool files. Simon is going to share insight into how you can go even further in what you can extract from spool files with tools that everyone has available on IBM i. The meeting will be held in virtual format through gotomeeting only. We hope you'll join in and look forward to seeing you there.

In March we'll have John Wescott from IBM presenting **Streaming/Replicating Db2i Data into "The Cloud"**. IBM continues to deliver new solutions to the IBM I community needs. Join us in March to find out more of how you can make use of the cloud with DB2 data.

COMMON will be held in Colorado this Spring April 24th through 27th. Check out flight prices from DTW to Colorado and you may think twice about participating. Flights are very affordable. COMMON has a robust agenda, as always, and plenty to offer for everyone. Visit www.common.org for details.

POWERUp 2023

The COMMON community will gather again in-person to enjoy learning high quality IBM i education, networking with peers, industry experts, and solution providers, and growing together as a whole.

Mark your calendars for April 24-27 to join COMMON for education, networking, and scenic views in the Mile High City - Denver!

We are in progress of refreshing the SEMIUG web site. It's time to modernize. We will soon be replacing our site with a new refreshed site. If you have ideas for improvements please share with Laura at ubelhor@sbcglobal.net.

We'll look forward to seeing you at our virtual February meeting. If you have topics, presenters or specific presentations that you'd like to see presented through SEMIUG don't hesitate to reach out to any of the SEMIUG board.
